

I was not feeling good and was looking at a place where I could have some exams of my whole body. To have a full body scan in a short time. To have ease of mind to see if I really had something wrong with me.

I found AIM, it was just perfect. You know when you are treated with friendly respect. When we belong to the senior world, some people tend to be condescending. Well its not that kind of place.

From Linda (the sec) to Wayne (the technician) to Dr. Attariwale (a sweetheart) were all just great competent people who make feel great when I get there and took good care of me.

After my scan Dr Attariwala spoke with me and explain me my scan,it's been done with great manner and lots of details so everything would be clear to me. I could not wait to tell my experience to the whole world.

Everybody told us about prevention for our health, eat well,drink water,don't smoke etc. but..nobody told you that you can push a little more with a full body scan.

That way we can prevent all kinds of tumors etc ,isn't it the best to have a peace of mind along with no stress, which is key to good health.

I have been treated with friendly respect.When we belong to the senior world,sometimes people tend to treat us with condecending,well its not the place.

This testimony has come from myself, nobody at AIM ask me to do it,its me who wanted to do it.I had lots exams in my life and I think this one has been the more conclusive.
